

LiquidGo

Liquid Waste Management, Made Simple.

Business & Product Overview

Ghana | For Investors, Partners & Operators | 2025

1. The Problem

Getting liquid waste removed in Ghana — whether it is a flooded septic tank, a full soak pit, or industrial waste — is unnecessarily difficult. Here is what people currently go through:

- There is no reliable way to find a licensed waste removal vehicle nearby.
- Customers rely on word-of-mouth or random phone numbers, with no guarantee the driver will show up.
- Prices are negotiated on the spot with no transparency — customers often overpay.
- Drivers waste time and fuel chasing jobs through personal networks.
- No accountability: if the job is done poorly, there is no way to report it.

The result is a broken, unreliable market that frustrates both customers and service providers.

2. The Solution

LiquidGo is an app that connects people who need liquid waste removed with the nearest available licensed driver — quickly, transparently, and safely.

Think of it like ordering a ride on a ride-hailing app, but for liquid waste removal. A customer opens the app, describes what they need, sees a clear price, and a nearby driver is on their way within minutes.

For drivers and operators, LiquidGo is a steady stream of verified, paid jobs — no more chasing customers or haggling over prices.

3. How It Works

For a Customer

1. Sign up and enter your location.
2. Describe what you need — select your waste type and estimated tank or pit size.
3. See a clear price upfront — no negotiation.

4. Confirm the booking — the nearest available driver is notified.
5. The driver arrives and completes the job.
6. Pay securely via mobile money or card. Rate your driver.

For a Driver or Operator

7. Register your vehicle and upload your documents for verification.
8. Once approved, go online when you are available for work.
9. Receive job requests from nearby customers on your phone.
10. Complete the job and receive payment directly to your mobile money account.
11. Build your reputation with customer ratings.

4. Who It Serves

Who	What They Get
Homeowners & Landlords	Fast, reliable, fairly-priced liquid waste removal on demand
Businesses & Companies	Scheduled or on-demand waste removal with a digital record of every job
Independent Drivers	A steady flow of paying jobs without needing to market themselves
Fleet Companies	A single dashboard to manage all their drivers, jobs, and earnings
LiquidGo (Platform)	A commission on every completed job

5. How Pricing Works

Every job has a clear price calculated before the customer confirms. The price is made up of three straightforward parts:

Part	What It Means
Show-up Fee	A fixed amount the driver earns just for coming to the job

Part	What It Means
Distance Charge	A small fee based on how far the driver travels to reach the customer
Job Size Charge	A fee based on the estimated size of the tank or pit (Small, Medium, or Large)

Drivers set their own show-up fee within a range LiquidGo defines. This keeps pricing competitive while protecting against underpricing. LiquidGo takes a commission from each completed job — the driver keeps the rest.

6. Business Model

LiquidGo earns a commission on every completed job. No job, no fee — we only make money when drivers make money.

Revenue Stream	Description
Transaction Commission	10–20% of the job value, deducted automatically from each completed payment
Premium Driver Listings (Future)	Drivers or companies pay to appear higher in search results
Subscription Plans for Fleets (Future)	Monthly fee for fleet companies to access advanced management tools

7. Market Opportunity

Ghana faces a significant sanitation challenge. According to public health data, a large portion of households — especially in urban areas like Accra and Kumasi — rely on on-site sanitation systems such as septic tanks and soak pits that require regular emptying.

- Millions of households and businesses need this service regularly.
- The current informal market is large but completely unorganised.
- There is no dominant digital player in this space in Ghana.
- Growing smartphone and mobile money penetration makes this the right time to digitise the sector.

LiquidGo is positioned to be the first mover in a large, underserved market.

8. Why LiquidGo Will Work

Factor	Why It Matters
Real, everyday need	Liquid waste does not stop accumulating — demand is constant and recurring
No strong competition	The market is informal and fragmented — there is no app doing this in Ghana today
Mobile money ready	Ghana has one of Africa's highest mobile money adoption rates — payments are easy
Low barrier for drivers	Drivers keep their vehicles and independence — LiquidGo just brings them customers
Scalable model	Once proven in Accra, the model can expand to Kumasi, Tamale, and beyond

9. Trust & Safety

LiquidGo is built on trust. Every driver on the platform goes through a verification process before they can accept a single job:

- Valid national ID
- Valid driving licence
- Vehicle registration certificate
- EPA (Environmental Protection Agency) waste handling permit

After every job, customers rate their driver and drivers rate their customers. Poorly rated drivers are flagged for review. This creates accountability on both sides and ensures service quality improves over time.

10. Launch Plan

Stage	What Happens
Stage 1 — Build & Recruit	Develop the platform. Pre-recruit verified drivers in Accra before going live.
Stage 2 — Soft Launch (Accra)	Launch to a limited set of customers and drivers. Gather feedback, fix issues.
Stage 3 — Full Accra Launch	Open to all customers and drivers in Accra. Begin marketing.
Stage 4 — Expand	Roll out to Kumasi, Tema, and other major cities based on demand.

11. Next Steps

- Finalise the LiquidGo brand and secure the domain name
- Set commission rates and pricing tiers for the Ghana market
- Confirm EPA permit requirements for driver onboarding
- Begin building the web platform
- Pre-recruit 20–50 verified drivers in Accra ahead of launch
- Run a soft launch with a pilot group of customers and drivers
